## **Subcision | DermNet NZ**

What is 'Subcision'? A subcision is a minor surgical procedure that involves the insertion of a special hypodermic needle through a small puncture in the surface of the skin. Deeper acne scars are tethered to the underlying skin tissue via fibrotic strands, and by inserting the sharp needle beneath the skin, your doctor can sever these strands. This allows for overall cosmetic improvement of the scars as the healing process initiates the growth of new and healthy collagen.
